

## Fix CREATE command denied to user 'mailuser'@'localhost' for table 'virtual\_domains'

Author : admin

I'm doing a new postfix + dovecot installation and after following [workaround.org](http://workaround.org) guide, to create MySQL databases and testing by logging in with mysql cli and trying to create databases as pointed by guide I stubmed on error:

### CREATE command denied to user 'mailuser'@'localhost' for table 'virtual\_domains'

The error is because, mailuser doesn't have permissions to create tables in **mailserver** DB to fix that: I had to login in *MySQL server* as root and issue GRANT PRIVILEGES on table, i.e.:

```
mysql -u root -p
password:
mysql> GRANT ALL PRIVILEGES ON `mailserver`.* TO 'mailuser'@'localhost';
```

Problem Solved! ;)
