

How to show country flag, web browser type and Operating System in Wordpress Comments

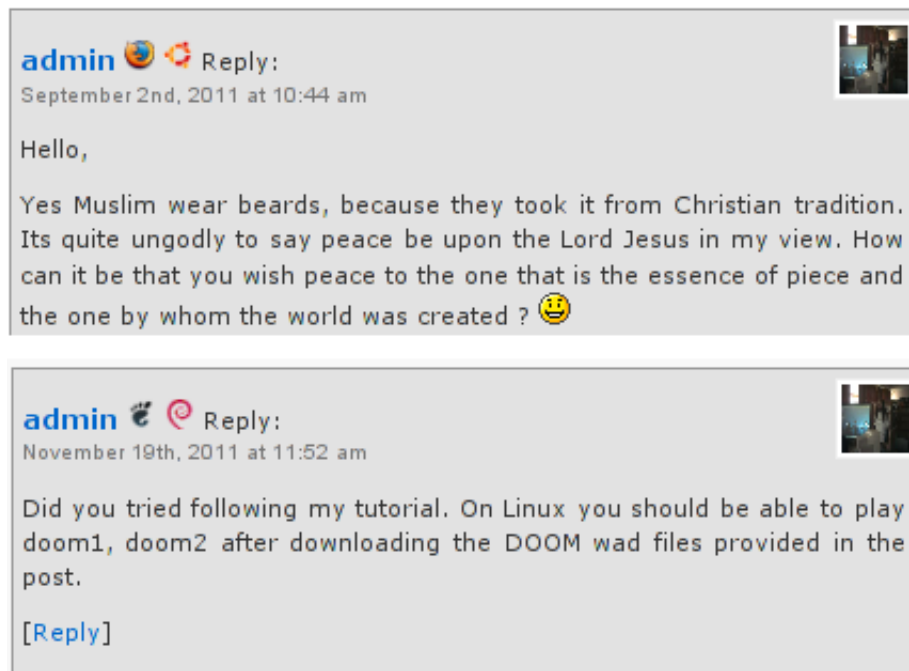

Author : admin

!!! IMPORTANT UPDATE COMMENT INFO DETECTOR IS NO LONGER SUPPORTED (IS OBSOLETE) AND THE COUNTRY FLAGS AND OPERATING SYSTEM WILL BE NOT SHOWING INSTEAD,

!!!! TO MAKE THE COUNTRY FLAGS AND OS WP FUNCTIONALITY WORK AGAIN YOU WILL NEED TO INSTALL WP-USERAGENT !!!

I've come across a nice *Wordpress plugin that displays country flag, operating system and web browser* used in each of posted comments blog comments.

Its really nice plugin, since it adds some transparency and colorfulness to each of blog comments ;) here is a screenshot of my blog with **Comments Info Detector** "in action":

Comments Info Detector as of time of writing is at stable ver 1.0.5.

The plugin installation and configuration is very easy as with most other *WP* plugins. To install the plugin;

1. Download and unzip Comments Info Detector

```
linux:/var/www/blog:# cd wp-content/plugins
linux:/var/www/blog/wp-content/plugins:# wget http://downloads.wordpress.org/plugin/comment-info-detector.zip
...
linux:/var/www/blog/wp-content/plugins:# unzip comment-info-detector.zip
...
```

Just for the sake of preservation of history, I've made a [mirror of comments-info-detector 1.0.5 wp plugin for download here](#)

2. Activate Comment-Info-Detector

To enable the plugin Navigate to;
Plugins -> Inactive -> Comment Info Detector (Activate)

After having enabled the plugin as a last 3rd step it has to be configured.

3. Configure comment-info-detector wp plugin

By default the plugin is disabled. To change it to enabled (configure it) by navigating to:

Settings -> Comments Info Detector

Next a page will appear with variout fields and web forms, where stuff can be changed. Here almost all of it should be left as it is the only change should be in the drop down menus near the end of the page:

Display Country Flags Automatically (*Change No to Yes*)

Display Web Browsers and OS Automatically (*Change No to Yes*)

Display Country Flags
Automatically:

Yes

Use this option if you don't want to modify your theme code

Display Web Browsers
and OS Automatically:

Yes

Use this option if you don't want to modify your theme code

Save Changes

After the two menus are set to "Yes" and pressing on *Save Changes* the plugin is enabled it will immediately start showing information inside each comment the GeoIP country location flag of the person who commented as well as OS type and Web Browser :)
