

How to substitute default TinyMCE Joomla Content editor with JCE Content Editor

Author : admin

This content editor is really awesome compared to the default editor TinyMCE. If you want to have an options rich content editor for Joomla, then this is the one for you :)

[download JCE Content Editor here](#)

After installing the **JCE Joomla content editor** in order to enable it as a default editor you need to go to the following location:

Site -> Global Configuration -> Default WYSIWYG Editor

There place on **Editor TinyMCE** and change it with **Editor - JCE**

Now go to edit some article, and you will see the difference in the editor :)

7. Add gallery Joomla capabilities with sigplus (Image Gallery Plus) and Very Simple Image Gallery

sigplus Image Gallery Plus is a straightforward way to add image or photo galleries to a Joomla article with a simple syntax. It takes a matter of minutes to set up a gallery but those who are looking for a powerful gallery solution will not be disappointed either: sigplus is suitable for both beginner and advanced users.
